S2|DATA

Enhanced Intelligibility of Legacy Video & Audio Recordings

CUSTOMER:	Intelligent Voice, a legal services organization
S2|DATA's ROLE:	Restore and transcribe degraded historical audio/video recordings
TYPE OF PROJECT:	Legacy Media Restoration
RESULT:	Vendor easily able to catalog and search legacy recordings

THE BUSINESS SITUATION

A legal organization needed to extract evidence from decades-old audio and video recordings that were nearly unintelligible due to poor recording quality and media degradation.

THE CHALLENGE

Recordings were captured on obsolete consumer-grade equipment

- Audio quality was severely compromised by background noise and distance
- Original media was fragile and at risk of further degradation
- Legal teams needed accurate, defensible transcriptions

THE RESULTS

Successfully recovered previously unintelligible audio

- Produced court-admissible transcriptions
- Reduced attorney review time and associated costs
- Created repeatable workflow for similar cases
- Maintained complete chain of custody

The project demonstrated S2|DATA's ability to recover critical evidence from severely degraded legacy media while maintaining legal defensibility.
